

Ford Transit Ambulance

We are pleased to introduce our newest ambulance innovation on the mid-roof Ford Transit. Our lightweight formed interior takes advantage of the contours of the Transit chassis, which provides noticeably more interior space and a higher payload capacity than any other ambulance conversion.

Enhanced Safety & Payload

- Payload capacity of 2,500 lbs on the T/250 and 3,000 lbs on the T/350
- Unique contoured interior adds 2" of aisle width over traditional straight wall construction
- Fewer seams than traditional wood/mica/aluminum interiors, making it easy to sanitize
- Energy-absorbent, flexible walls with rounded corners are less likely to cause injury in the event of a collision
- Bright interior enhances lighting for performing medical procedures

Ergonomics & Functionality

- Easy to access strategically located medical equipment, lighting controls & AC system while remaining safely seated
- Access stair chair compartment & ALS kit tree from outside the vehicle
- Increased cab room with full seat recline for improved comfort
- Solid state electrical system for easy troubleshooting
- Choice of squad bench or single-person swivel seat & paramedic work station

The Malley Transit incorporates several standard features not found with other manufacturers at a competitive price.

Operating Cost Savings

The lightweight Malley conversion will reduce operating costs by improving fuel economy and decreasing wear on replaceable chassis components.

Compliance

Compliance and certification testing successfully completed to meet the highest level ambulance standards in North America.
